

Climate Change Strategy Survey

Chesterfield Borough Council is developing its new Climate Change Strategy to provide the Council with a pathway to becoming carbon neutral by 2030. Using a broad range of data, the Council has developed a draft set of strategic themes which we would like your feedback on as part of our ongoing programme of engagement on climate change.

This strategy will guide our actions to help us achieve our 2030 goal of becoming a climate neutral organisation. It will also set the groundwork to achieve the Borough's target of becoming carbon neutral by 2050, and be underpinned by a delivery plan which will be reviewed at least annually.

Before taking part in the survey, please take the time to read the background information which outlines the proposed themes of the strategy, and the glossary of terms. Once you have looked through these documents you can share your feedback using our online survey.

The background document which sets out key themes also provides examples of the types of activities that could fit within each theme.

Our online survey allows you to tell us which themes you think are most important and to provide your suggestions for activities which could be included under each theme within the strategy.

All of the information can be found on the Council's website
at: <https://www.chesterfield.gov.uk/climate-survey>
